Module Name:Boundary Value Analysis & Equivalence Partitioning
Test Case ID:ST-07
Webpage URL:https://www.automationexercise.com/

Scenario_ID:EP_01
Scenario:Below Valid Range
Test Case Steps:
Enter age and submit

Scenario_ID:EP_02
Scenario: Valid Range
Test Case Steps:
Enter age and submit

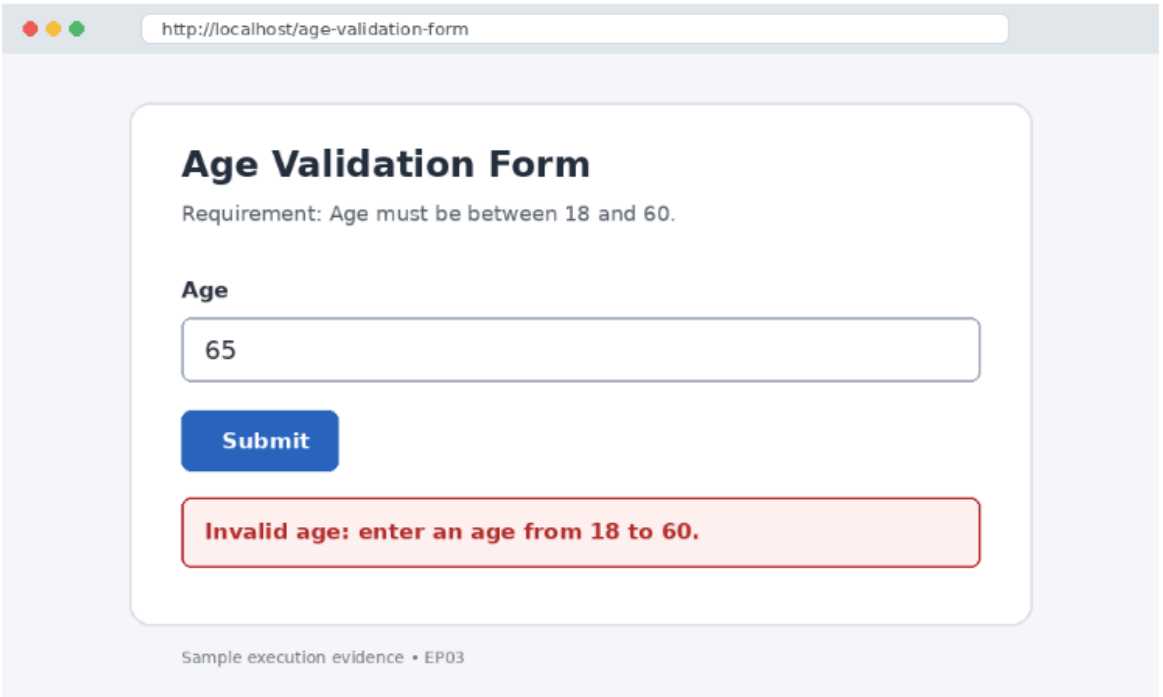

Scenario_ID:EP_03

Scenario: Above Valid Range

Test Case Steps:

Enter age and submit

Conclusion

The test design covers values just below, at, and just above both boundaries, plus representative values from the valid and invalid equivalence classes. Based on the sample validation behavior shown, all listed cases match the expected results. These results are illustrative; perform the tests in the actual application and replace the sample screenshots with real execution evidence before submission.

Appendix: Test Case Summary

TC cases: 16 (Invalid), 18 (Valid), 19 (Valid), 59 (Valid), 60 (Valid), 61 (Invalid).

EP cases: 15 (Below 18, Invalid), 30 (18–60, Valid), 65 (Above 60, Invalid).
